BESPOKE ARCHITECTURAL DESIGN
AND VISUALISATION

THE BESPOKE DESIGN PROCESS

DESIGN

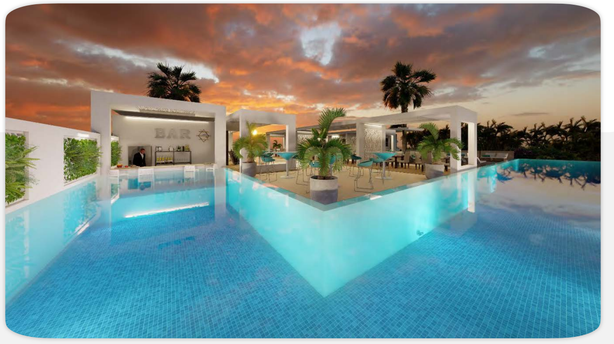
We provide concept designs of a building based on client requirement and the architectural features of the project to establish external finishes, architectural detailing and interior design.

ARCHITECTURE

This phase provides building floor-plans, elevations, detailed information about interior and exterior fixtures and fittings and a full scope of supply for each building.

VISUALISATION

We build a computer generated 3D model of an entire project enabling you to study the building, inside and out, from any viewpoint. High quality video and 360 degree walk through presentations are drawn from this 3D model allowing us to provide detailed high resolution CGI images.



PROJECT DESIGN...

START TO FINISH PROJECT CONSULTANCY...

End to end project design begins with master site planning and concept building design.

Three dimensional CAD models provide the ability to generate and manipulate high quality images, video and graphic representation of a property in real time

ARCHITECTURAL DESIGN

RESIDENTIAL

Modular homes designed, manufactured and installed to customer plans and specifications

RESORT

Architectural design and modular construction for hotel, resort and retail applications

DEVELOPMENT

Design and build services for commercial projects and property developments

COMMERCIAL

Commercial building design for municipal and government projects

SITE PLANNING

GEO-LOCATION

The starting point of any design project uses cutting edge satellite terrain mapping technology allows us to pinpoint the exact location of your project and it’s topology anywhere in the world.

MASTER SITE PLAN

Large scale site planning and overview imagery provides a clear and to scale impression of a project. Pictorial and realistic birds eye view floor plans assist in space visualisation and building layout.

VISUALISATION

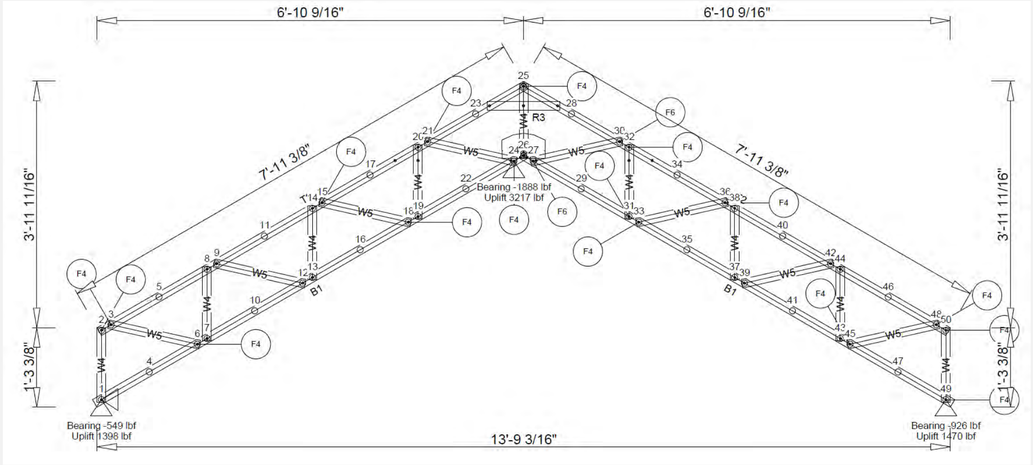
Three dimensional photo realistic imagery facilitating high quality images, video and architectural plans for visualisation, promotional and marketing purposes prior to construction.

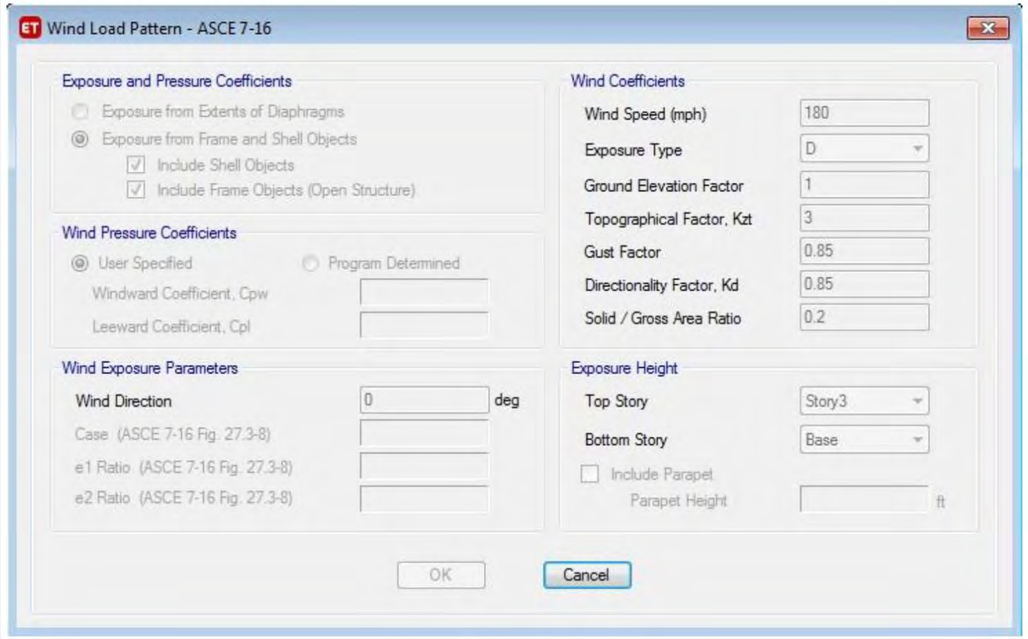
ENGINEERING...

DESIGNED TO OUTPERFORM...

The engineering design phase of a project dictates how to actually fabricate the buildings from a structural viewpoint.

We provide full construction plans, structural calculations to ASCE7-16 and fabrication and assembly drawings. The resulting engineering reports will be submitted to the Ministry of Public Works or other relevant authority together with the architectural plans for approval.





INTERIOR DESIGN AND FINISHES

All of our homes are provided with a complete interior decor package including fitted kitchen cabinetry, premium quality sanitary ware and a selection of wall and floor finishes. Customers may choose from a wide variety of finishes, flooring, kitchen cabinetry and bathrooms, to personalise a home and our interior design team are on hand to assist and make recommendations.

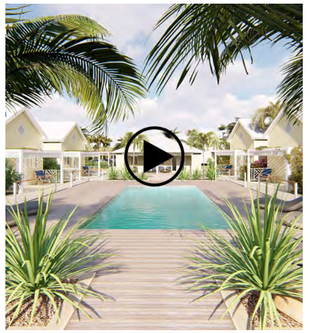
Video

VISUALISATION



Three dimensional photo realistic imagery allowing concept designs to be developed from architecturally accurate CAD drawings into digitally produced 3D renders and project imagery, high quality images, video and architectural plans for promotional and marketing purposes prior to construction.

This media can easily be transformed into content suitable for distribution over a wide range of social media platforms, web based applications and promotional channels.

3D MODELLING

3D models allow us to generate full high definition video renders provide a complete real time overview of a property or project incorporation both interior and exterior aspects. 360 degree viewings, video flythrough, hero video clips.

VISUALISATION: PHOTOREALISTIC IMAGERY

Accurate and compelling imagery of your project providing high quality content for promotional purposes.
